

## The benefits of BIBS Baby Glass Bottle

We are extremely proud of the new BIBS Baby Glass Bottle and all its benefits. Please read on to get all the benefits of our baby bottle.

### 1. Made of borosilicate glass

The bottle is made of first-class borosilicate glass, that is temperature- and thermal shock-resistant, durable, shatter-resistant, and more. Our baby bottle withstands freezing, thawing in boiling water, microwave heating, and dishwasher cleaning. Further, it does not emit microplastics or other harmful toxins. Since glass resists chemicals and acid degradation, you don't need to worry about harmful chemicals or microplastics leaking into the milk. Also, glass does not contain any BPA, PVC, or phthalates.

### 2. Food-grade material

All other parts are made of 100% safe food-grade material.

### 3. Comes with a bumper

Our baby bottle comes with a bumper at the bottom of the bottle. The bumper has multiple functions. It is non-slip and makes the bottle noiseless when being placed at a table. It also functions as a safety measure in the case that the bottle is dropped on the floor.

### 4. Easy to clean

It is easy to clean. Glass does not damage easily, and our baby bottles do not get scratches and abrasions that hold onto bacteria and other residues, making it easy to clean and sanitize. And it goes in the dishwasher. OBS: Do not clean the latex nipple in the dishwasher! This will break the nipple. The nipple should be sterilized by scalding.

### 5. Do not change

The bottle will not change shape over time, discolor or fade.

### 6. Natural rubber latex nipple

The nipple is produced from natural rubber latex. Natural Rubber latex is a natural material made from a sticky milky fluid tapped from the Hevea tree. The fluid is refined to the brown/yellow rubber you know from your pacifiers; a super soft, elastic, and resilient material very much resembling the mother's soft nipple.

## The benefits of BIBS Baby Glass Bottle

### 7. Breast-like nipple

The round nipple matches the nipple from our popular BIBS Colour pacifier, which is designed to mimic the mother's soft nipple in shape and size. This is to prevent "nipple"-confusion if you are both breastfeeding and supplementing with a bottle.

### 8. Anti-colic design

The nipple is designed with a valve for a smooth milk flow, that reduces air swallowed while feeding.

### 9. Different milk flows

Our bottle nipples come in two different flows: a slow flow and a medium flow.

### 10. Comes with a funnel

The funnel makes it easy for you to fill up the bottle fast and easily with less milk/formula waste. It can be folded together so it takes up the least amount of space and can be easily unfolded when it is time to be used.

### 11. Comes with a milk lock

Our baby bottle set contains a milk lock for easy and hygienic storage, which will be placed under the screw cap and cap. This makes it easy for you to take the bottle with you on the go, without having to worry about spilling the milk in your bag or the stroller.

### 12. Available in multiple colors

The baby bottle is available in a range of our beautiful BIBS colors. This means that you can Mix N' Match with separate Glass Bottles and colorful Bottle Kits.

### 13. Available in two sizes

The bottle is available in two sizes – 110 ml and 225 ml. This way you can choose the size that fits your baby's need the best.

### 14. Meet applicable standards

The bottle is specially developed to meet the European standard EN14350.
